DETAILED ACTION

Response to Arguments

1. This is a supplemental examiner's amendment to make a correction to claim 82. The first examiner's amendment was entered on 8/22/2006.

- 2. Applicant's arguments, filed 4/24/2006, with respect to the rejection(s) of claim(s) 54-87 under 103 (a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection would have been made in view of 112 rejections.
- 3. The applicant agreed to an examiner's amendment to place the claims in allowable form.

5. Claims 54-87.

The following is an examiner's statement of reasons for allowance:

Regarding claims 54,66,75,83 and 86, the applicant's admitted prior art teaches of a method of providing localization cues to a source audio signal to perceive a sound source at a selected direction and a selected distance from a listener's head based on a head related transfer function (HRTF) pair (Figure 8), providing a two channel audio signal from the source audio signal (Figure 8), spectrally shaping the two channel audio signal based on the HRTF pair (Figure 8 and Introducing a time delay between the channels of the two channel audio signal based on an interaural time delay associated with the selected direction (Figure 8). Prior art Brungart discloses auditory localization in the near-field. Prior art Lambrecht (US 6,181,800) discloses a system and method for interactive approximation of a head related transfer function. Prior art Wood et al. (US 6,009,179) discloses a method and apparatus for electronically embedding directional cures in two channels of sound. Prior art Kohut et al. (US 6,067,361) discloses method and apparatus for two channels of sound having directional cues.

Art Unit: 2615

Prior art Sibbald et al. (US 5,666,425) discloses plural channel sound processing. The prior art or combination thereof fails to disclose or make obvious providing localization cues to perceive a sound source at a selected near field distance that is less than 1.5 or 1 meters, based on a head related transfer function pair determined at some reference distance larger than the near field distance, wherein the spectral shaping is based on head related transfer pair at the reference distance and the gain is determined based on

the selected near field distance. Therefore, the prior art or combination thereof fails to

disclose or make obvious a method of providing localization cues to a source audio

Claims 55-65,67-74,76-82,84-85 and 87 are allowed due to dependency on claims 54.66,75,83 and 86.

signal, an apparatus for processing a source audio signal as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
